Customer Commitment

STS is continually attentive to the airline customer's training needs and encourages a close, direct working relationship with airline training personnel in order to be responsive to their detailed technical requirements. From the initial definition of the training equipment through production, test and post-delivery support, STS maintains close communications with airline representatives to ensure that STS equipment will meet or surpass the needs of the airline training team.

Cost Commitment

STS has a corporate structure and specialized business base which allows the company to be very cost competitive. The initial cost of ownership, when combined with low maintenance costs and high reliability result in excellent life cycle costs for the airline industry.

Performance Commitment

STS delivery performance is second to none. On several recent programs, STS has accelerated delivery, thus helping the airlines or end users meet continually more demanding ready for training dates. In addition, with today's increasing complexity of aircraft designs, STS works closely with its customers to ensure that delivery and performance requirements are maintained and improved, if and as necessary.

Safety Training Systems, Inc. (STS) has earned a reputation as a consistently reliable supplier of custom training equipment to the commercial aviation industry. STS specializes in designing and building cabin training devices, maintenance training devices, part task trainers, aircraft flight decks, mechanical and electrical subsystems, engineering mock-ups/test beds and related assemblies for large-business commercial and military customers in simulation, training, homeland defense and research industries. STS is considered to be the leading supplier of cabin attendant training equipment to both the domestic and international airline communities.

STS has developed specialized skills in its ability to design and manufacture to detailed customer specifications and statements of work.

STS, founded in 1979, is a Woman Owned Small Business, located in a HUB Zone, with broad based engineering and manufacturing capabilities, and is ISO 9001-2008 certified. STS has received numerous awards from major Prime Contractors and agencies for their performance on programs.
